

Jen/Mar Suite Features:

The following is a list of **some** of the features:

- custom programmable document output
- time slice analysis for graphs
- barcode support
- signature capture
- linking and displaying files (pictures or text files)
- date and time stamp
- Wi-Fi (wireless TCP/IP) support
- Pocket PC & Palm OS supported
- 1-8 inspection levels
- 1-8 auxiliary levels (hidden during inspection)
- weighting available on all levels
- multiple scales per template
- create your own customized scales
- grade required option
- comment required option
- comment types linked to each item
- comments on-the-fly
- recurring and one time only comments
- comment reporting:
 - ◆ # of times comment entered
 - ◆ unused comments
 - ◆ grades per comment
- any scale basis can be used to render grade values
- dynamic drill-down graphic output
- 50 focus item zooming levels on graph
- graph and report local and shared output templates
- customize graph logo and report header
- choice of database vendors
- supports access to multiple databases per user

Jen/Mar Suite Inspector

Jen/Mar Suite Inspector Overview

The ability to quickly and easily perform and analyze inspections is vital in many business, government and non-profit endeavors. The Jen/Mar Suite Inspector program facilitates that process. This full-featured inspection system is easy to understand and use, yet it's so flexible you can create and analyze any type of inspection. This saves money by eliminating the need for multiple inspection systems throughout an organization.

The Inspector client software has a desktop version and mobile versions for Palm OS and Pocket PC devices. The desktop software allows you to build inspection templates (which are used to perform inspections), print templates, perform inspections and create graphs and reports. The mobile software is used to perform inspections and can sync files with the server using Wi-Fi connections.

Benefits

- The combination of features allows YOU to create any combination of inspections needed, allowing you to standardize across all facility functions.
- Variety of pre-built inspections included – providing a ready out of the box solution.
- Time slices and dynamic drill-down/drill-up graphic output allows you to zero-in on problem areas or identify trends that would otherwise go unnoticed.
- Create custom programmable document output in Graph and Report to put your data to work for you.
- Comments linked to each item allows you to select rooms, employees, equipment, survey responses, etc. on-the-fly. Along with the ability to track number of times each comment was selected and analyze the results linked to each comment provides some interesting ways the software can be used. Also, unused comment reports inform you of items that require inspecting. For example: all fire extinguishers that haven't been inspected in the last 30 days.
- Ability to sort output ascending or descending allows you to see which items are deficient and which are the highest performers.
- Accountability for performance-based contracts.
- Identify project work to be done.
